

# PVCu French Window

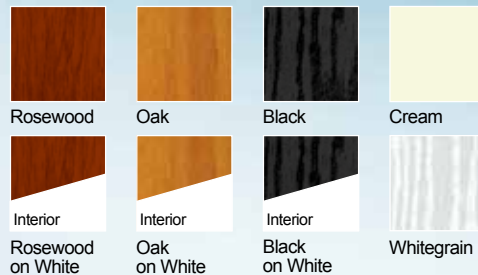

## STANDARD FINISHES

### PlatinumNRG Chamfered

### PlatinumNRG Sculptured

## OPTIONAL AVAILABLE FINISHES

Platinum  
NRG

Our French Windows have all the same great features as our casement windows, and add an extra dimension of light and space. French Windows give you a much bigger opening area than casement windows can provide, and can be an elegant solution to meet fire escape regulations in situations that would otherwise require a large opening window sash. Every French window is manufactured to the highest standard using top quality components and is subject to rigorous quality checks throughout its manufacture.

**SHOOT BOLTS**

The upper and lower parts of the locking mechanism contain not only a roller bolt but also shoot bolts that locate in the keeps mounted on the frame.

The combined shoot bolts and roller bolts offer 6-point locking which can be enhanced even further by optional hinge bolts.

**ROLLER BOLTS**

Roller Bolts contract to lock the sash into the opposing keep. Raising the handle by 90° expands the bolts to release from the keep.

**EASY CLEAN HINGES**

The hinges not only enable a full 90° opening but when opened, will slide the sash across to allow access to the outer sash from indoors.
